Presenter notes…

As AI systems proliferate across the organisation, a structured approach to identifying and managing risk is essential for compliance, ethics, and operational resilience.

1 ■■ Regulatory■Compliance

EU AI Act & ISO 42001
GDPR alignment
Audit-ready records
Regulator accountability

2 ■■ Operational■Resilience

Identify failure modes
Prevent costly outages
Protect data integrity
Business continuity

3 ■ Stakeholder■Trust

Transparent AI use
Ethical deployment
Board-level visibility
Customer confidence

■ 4 Sections	■ 6 AI System Slots	■ 5×5 Risk Matrix	✍■ Quarterly Review Cycle

What it is:

A complete registry of every AI system your organisation deploys or evaluates.

How to fill it in:

- **AI System Name** – Use the official system/product name
- **Department** – The team that owns or operates it
- **Purpose** – One sentence on what the system does
- **Risk Level** – Initial estimate: Low / Medium / High
- **Owner** – Named individual accountable for the system

Pro Tip: *Run a discovery workshop with department heads before completing this section to ensure no systems are missed.*

Example Entries:

System	Dept	Risk
ChatBot v2	Customer Svc	**Low**
Credit Scorer	Finance	**Medium**
HR Screener	People	**High**

■■ Risk Level Key:■ Low = minimal harm | Medium = monitor■ High = robust contro

Presenter notes…

1 Identify System → 2 Likelihood Rating → 3 Impact Rating → 4 Risk Score L × I → 5 Mitigation Plan → 6 Residual Risk

Likelihood Scale (1–5):

1	Rare – Highly unlikely
2	Unlikely – Below average chance
3	Possible – Even chance
4	Likely – Above average
5	Almost Certain

Impact Scale (1–5):

1	Negligible – Minimal operational effect
2	Minor – Small recoverable impact
3	Moderate – Notable disruption
4	Major – Significant harm or loss
5	Critical – Severe / irreversible

Presenter notes…

Reading the 5×5 Risk Matrix:

Cross-reference the **Likelihood** (rows) against **Impact** (columns) to determine the **Inherent Risk Score** (1–25).

	1	2	3	4	5
5	5	10	15	20	25
4	4	8	12	16	20
3	3	6	9	12	15
2	2	4	6	8	10
1	1	2	3	4	5

Rows = Likelihood · Columns = Impact

Risk Bands & Required Actions:

● **Low (1–4)**	Accept / Monitor annually
● **Medium (5–12)**	Mitigate / Monitor quarterly
● **High (13–25)**	Immediate action required

■ Example:■ Likelihood 4 (Likely) × Impact 3 (Moderate)■ = Score 12 → Medium Risk

Presenter notes…

Who Needs to Sign Off?

Role	Responsibility
AI Risk Lead	Coordinates assessment; validates scores
Department Head	Confirms system details; owns mitigations
Data Protection Officer	Reviews data handling & GDPR compliance
Executive Sponsor	Final approval; escalation authority

Review & Governance Cycle:

- Complete workbook **before** AI system goes live
- Conduct **quarterly reviews** or after major model updates
- Store completed workbooks in the **AI Governance Register**
- Escalate High-risk findings to **Executive Sponsor within 5 days**
- Archive superseded versions with version number & date

Completion Checklist:■ ■ All 6 inventory rows populated■ ■ All 3 evaluation cards compl

■ **Presenter Notes:**

Presenter notes…

■ This Week

- Schedule AI discovery workshop
- Identify all AI system owners
- Assign AI Risk Lead role

■ This Month

- Complete Section 1 inventory
- Conduct first risk evaluations
- Submit for sign-off

■ Ongoing

- Quarterly review cadence
- Update after model changes
- Track via risk register

Key Takeaways:

1■■	Every AI system carries risk – identify it before deployment, not after.
2■■	Use Likelihood × Impact to produce an objective, defensible risk score.
3■■	Mitigation is a team effort – no single person owns AI risk.
4■■	This workbook is a living document – review it every quarter.
